WHAT IS CLAIMED IS:

- 1. A coated metal electrode, the metal electrode comprising a coating and an overcoating, wherein the overcoating comprises a surfactant, wherein the coating comprises a sulfur containing moiety in its molecular structure, and wherein a temporal stability of the coated metal electrode is greater than a temporal stability of a corresponding uncoated metal electrode.
- 2. The coated metal electrode according to Claim 1, wherein the sulfur containing moiety comprises a thiol.
- 3. The coated metal electrode according to Claim 1, wherein the sulfur containing moiety comprises a disulfide.
- 4. The coated metal electrode according to Claim 1, wherein the sulfur containing moiety comprises SO_x.
 - 5. The coated metal electrode according to Claim 1, wherein the sulfur containing moiety is incorporated in a cyclic structure.
 - 6. The coated metal electrode according to Claim 1, wherein the coating further comprises a hydrophilic group.
 - 7. The coated metal electrode according to Claim 6, wherein the hydrophilic group is selected from the group consisting of a hydroxyl group, an amine group, a carboxyl group, a carboxyl group, and an oligo(ethyleneoxide)chain group.
 - 8. The coated metal electrode according to Claim 6, wherein the hydrophilic group comprises a zwitterionic species.
 - 9. The coated metal electrode according to Claim 8, wherein the zwitterionic species comprises an amine group and a carboxyl group.
 - 10. The coated metal electrode according to Claim 6, wherein the coating further comprises a spacer between the sulfur containing moiety and the hydrophilic group.
 - 11. The coated metal electrode according to Claim 10, wherein the spacer comprises an alkyl group or an aromatic group.
 - 12. The coated metal electrode according to Claim 11, wherein the alkyl group comprises at least one of a methylene group and an ethylene group.
 - 13. The coated metal electrode according to Claim 1, wherein the coating further comprises a compound selected from the group consisting of 2-mercaptoethanol, 2-

mercaptoethylamine, 3-mercaptopropionic acid, thiophene, cysteine, homocysteine, 3-carboxythiophene, and cystine.

- 13. The coated metal electrode according to Claim 12, wherein the compound is a stereospecific compound.
- 14. The coated metal electrode according to Claim 13, wherein the stereospecific compound comprises a mixture of D isomers and L isomers.
- 14. The coated metal electrode according to Claim 13, wherein the stereospecific compound comprises a D isomer.
- 14. The coated metal electrode according to Claim 13, wherein the stereospecific compound comprises an L isomer.
- 16. A method of preparing a metal electrode stabilized by a coating, the method comprising:

contacting a metal electrode with a substance comprising a sulfur containing moiety in its molecular structure; and thereafter

contacting the metal electrode with a surfactant, whereby a coated metal electrode is obtained, wherein a temporal stability of the coated metal electrode is increased relative to that of a corresponding uncoated metal electrode.

17. A method of sensing an analyte, the method comprising:

contacting a sample comprising an analyte to a metal electrode, the metal electrode comprising a coating and an overcoating, wherein the overcoating comprises a surfactant, wherein the coating comprises a sulfur containing moiety in its molecular structure, and wherein a temporal stability of the coated metal electrode is greater than a temporal stability of a corresponding uncoated metal electrode; and

obtaining a measurement indicative of a presence of the analyte in the sample.
